

BULLETIN #01
January 2020

We repair, service, and maintain electron accelerators

2019 RESULTS

Since its creation in 2018, MSE has striven to be an active player in the world of electron accelerators, as a dynamic engineering & maintenance company.

MSE is evolving on different markets implementing the use of e⁻ machines in collaboration with a broad range of endusers and manufacturers. This year, MSE decided to extend its field of expertise, and is now proud to work on 7 types of accelerators, ranging from low to high energy (100KV to 10MV).

In 2019, our business activity took us around the world to address technical challenges such as maintaining facilities, auditing existing plants, developing and qualifying new components, installing new machines and commissioning new process lines, sourcing reliable suppliers. In parallel, encouraging new partnerships and building strong relationships with customers.

These results align with the company vision and sustained commitments to provide quality and timely support to its clients, looking forward to 2020 !

SERVICES

- Maintenance of your accelerator
- Engineering
- Spare parts
- Installation
- Dosimetry
- Repair electronic components
- Upgrades
- Training
- Process optimisation
- Hotline
- Technical support

SPARE PARTS AVAILABLE IN 2020

MSE supplies most components and parts of your accelerator, including hardly accessible or obsolete ones.

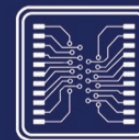

OSCILLATOR TUBES

Equivalents E2V and Thalès
for oscillators
150KW, 225KW et 375KW

TITANIUM FOILS & ALUMINUM SEALS

Window foils & metallic seals available
for all types of scan horn

MILLENIUM, DPC1000, DPC2000

Many parts available for various
types of accelerator, control
console, oscillator, etc..

And more upon request
